

This board will receive power by being jumped into Mihir's board as this power supply will be used for testing purposes.**

```
**Once the room reaches a certain brightness, the photoresistor sends an input signal to
Mihir's board to close the curtains.**
```

****This is the ribbon cable connector, where the digital and analog signals are inputted/recieved. The digital signals come from pins 1-5 and the analog signals are from 6 and 7.****

****Connector 1B is a backup connector incase connector 1A fails. ****
